

REMARKS

Claim 1 has been revised by the introduction of the term "and the expansion chamber" in the penultimate line of the claim. The concluding clause of claim 1 now stresses that the rotation means (as described on page 7, lines 1-17 of the specification) associated with the ram (4) rotate the apparatus (1) and the expansion chamber (2) from the morning position to the evening position upon extension of the ram.

The prior art documents cited in the international search report, and made of record in the Information Disclosure Statement filed concurrently, disclose solar tracking devices employing an expansion chamber that is fixed and does not rotate as the tracking device rotates.

Prompt, and favorable, consideration of claims 1-9, as revised, is earnestly solicited and eagerly awaited.

Respectfully submitted,

Martin P. Hoffman
